Index of Authors

A

Alexander, J. A. 22–44
Almeter, F. M. 492–504
Altstetter, C. J. 287–300
Amra, L. H. 451–461
Andes, G. M. 193–201
Averbach, B. L. 287–300

B

Backofen, W. A. 264–267
Backofen, W. A. 389–398
Baldwin, Jr., W. M. 230–250
Barclay, W. F. 22–44
Beck, Richard L. 542–555
Beck, Richard L. 556–564
Bennett, J. A. 362–363
Berger, Harold 251–254
Black, Hugh L. 685–696
Blackledge, James P. 429–438
Bonilla, Charles F. 877–890
Bradford, S. A. 169–177
Bransky, J. 335–346
Breyer, N. N. 667–684
Briggs, C. W. 319–334
Brisbane, A. W. 179–192
Buehler, W. J. 269–276
Burke, E. C. 492–504
Burke, J. J. 264–267
Burr, Arthur A. 786–789
Bush, R. H. 654–666

C

Cahill, J. A. 844–848
Cahill, J. A. 849–852
Carlsen, Kurt M. 10–21
Carlsen, Kurt M. 462–473
Carlson, O. N. 169–177
Carr, Frank L. 599–612
Cohen, Morris 287–300
Cohen, Morris 347–361
Collins, C. G. 565–579
Cprek, Erwin R. 369–372

D

Daane, A. H. 483–491
Decker, R. F. 58–76
Decker, R. F. 518–530
Donachie, Jr., Matthew J. 45–50
Donachie, Jr., Matthew J. 51–57
Dorn, J. E. 149–157
Dorn, J. E. 505–517

E

Eash, J. T. 58–76
Edelson, B. I. 230–250
Eggert, G. L. 891–897
Ells, C. E. 744–748
English, A. T. 389–398
Evans, W. 744–748

F

Fisher, John C. 916–932
Floreen, S. 518–530

G

Gerard, George 373–388
Giraud, Henri J. 853–857
Godfrey, T. G. 749–751
Goldman, A. J. 58–76
Grace, R. E. 858–865
Guarnieri, G. J. 307–318
Guntner, C. J. 399–419
Guy, A. G. 1–9
Guy, A. G. 737–743

H

Heckel, R. W. 193–201
Hehemann, R. F. 135–148
Hoffman, Nathan J. 254–259
Houck, J. A. 728–736
Hornbogen, E. 719–727
Hosford, Jr., W. F. 264–267
Hucke, Edward E. 866–876
Huggins, Robert A. 259–261
Hultgren, Ralph 853–857
Humenik, Jr., M. 778–785
Hurd, D. T. 451–461

I

Imgram, A. G. 202–213
Irish, Carolyn R. 613–623

Yen, C. S. 214–229

Subject Index

A

Activation energies
  for propagation of Luder's bands... 505–517
Age hardening
  of Fe-Ni-C martensite..... 356
Age-hardenable nickel alloy
  temperature dependence of fracture. 580–598
Aluminum
  2024
    lattice strains under elastic loading.. 51–57
  critical resolved shear stress..... 367
Aluminum alloys
  embrittlement by mercury..... 429–438
Aluminum-magnesium alloy
  activation energies and volumes for Luder's bands..... 505–517
Annealing
  of 18% Ni maraging steels..... 518–530
Anodic oxidation
  to reveal inhomogeneity in refractory alloys.. 363–365
Antimony
  liquid, density of..... 849–852
ASM Annual Dinner..... 996
ASM Annual Meeting..... 969–995
ASM Awards and Distinguished Service Luncheon..... 969
ASM Chapters and Officers..... 944–955
ASM Election of Officers..... 993
ASM Foundation for Education and Research.. 992
ASM Managing Director's Report.... 988–991
ASM Medalists, Awards and Honorary and Life Members..... 934–938
ASM Officers and Trustees..... 933
ASM Presidential Address..... 982–937
ASM Secretary's Report..... 977–981
ASM Standing Committees..... 938–943
ASM Technical Program at the 44th Annual Convention..... 956–968
ASM Treasurer's Report..... 970–976
ASM Vice-President's Report..... 994–995
ASM Young Engineers' Day..... 996–997
Atomic mobility in liquid metals..... 826–843
Ausforming
  effect on notch-impact strength of 3% Ni-3% Mo die steel..... 654–666
  of 5% Cr tool steel..... 420–428
  of alloy steels..... 640–653
Austenite
  cold worked, for increased strength of alloy steels..... 640–653
  retention in 9% nickel steel..... 138
Austenite-martensite transformation in Cr-Ni stainless steels..... 462–473
Austenite, retained
  in 18 Cr-2Ni..... 282
  in 43xx steel..... 288

B

Bend test apparatus..... 308
Beryllium
  effect of hydrogen on structure.... 744–748
  effect of rolling parameters on properties.. 685–696
  surface damage..... 492–504
  surface microstructure vs mechanical properties..... 492–504
Bismuth alloys
  liquid, electric mobilities..... 866–876
Bonded fibers..... 922
Brass, 70/30 alpha
  critical resolved shear-stress..... 367
Brittle-ductile transition in high-strength strip steels..... 10–21
Brittleness
  effect of mechanical fibering on..... 389–398
  in 3130 steel..... 439–450
  in hot rolled plate..... 389–398
  of aluminum alloys..... 429–438

C

Campbell Memorial Lecture..... 916–932
Carbon
  effect on properties of killed low-carbon steel. 624–639
  effect on strength of mild steel..... 101–118
Castings, steel
  bend test bars..... 324
  effect of risers on shrinkage..... 320
  shrinkage discontinuities..... 320
  T-section specimens..... 328, 330, 331
Cesium
  liquid, vapor pressure of..... 877–890
Coatings, oxide
  for tungsten..... 316
Cold drawing
  of martensitic steels..... 667–684
Columbium
  activation energy for low-temperature deformation..... 186
  effect of hydrogen content on ductile-brittle behavior..... 180, 188
  effect of strain rate on ductile-brittle behavior 180, 185
  hardening due to oxygen diffusion..... 132
  metallography of metal-oxide interface.. 127
  oxide phases..... 125
  oxydation kinetics..... 121
  oxygen penetration..... 129
  reaction with oxygen..... 121, 122, 123
Constitution
  of Hg-In alloys..... 891–897
Constitution diagram
  for 16 Cr-2 Ni stainless..... 277–286
  Gd-Y system..... 487
  La-Gd system..... 485

Constitution diagram (cont.)
La-Y system ... 486
Th-V system ... 303
Zr-H system ... 543
Crack propagation
in beryllium ... 492–504
in brass ... 24
Crack propagation rate ... 28
effect of bending ... 4
effect of mercury pressure ... 30
effect of sheet thickness ... 34
effect of stress relief ... 35
effect of temperature ... 31
in 2024-ST4 aluminum ... 28
in 70/30 brass ... 29, 31
Crack propagation velocity ... 30
Creep properties
titanium-aluminum alloys ... 202–213
Copper
critical resolved shear-stress ... 367
Copper-nickel alloys
oxidation ... 158–168
Copper-zirconium-arsenic alloys
effect of arsenic on strength and electrical conductivity ... 531–541
Corrosion
of Zircaloy-2 ... 77–99
of Zircaloy-4 ... 77–99

D

Deformation
activation volumes for, in Al-Mg alloy ... 505–517
effect on strength of as-quenched alloy steels 667–684
energy of activation for, in Al-Mg alloy ... 505–517
Deformation by slip
in magnesium-lithium crystals ... 150
Density
of liquid Pu and Pu-Ce-Co alloy ... 819–825
of liquid Sb ... 849–852
of liquid Sn ... 844–848
Diffusion
analysis in three component systems ... 1–9
coefficient, interdiffusion ... 3
coefficient, intrinsic diffusion ... 3
contribution of, to sludge formation in Pb-Hg ... 254–259
Fick's law ... 2
Diffusion behavior
interstitial components ... 6–7
substitutional components ... 1–6
Dimensional changes, on tempering martensite in 43xx steels ... 292
Discussions to papers ... 998–1119
Dislocation nucleation
study of, in Fe-1.8% P alloy ... 720
Dislocations ... 916–932
in Al-Mg alloy ... 505–517
Ductility
in beryllium ... 492–504
Ductility (cont.)
mechanisms in Duranickel ... 580–598
titanium alloy ... 373–389
Ductility ratio
design implications ... 384

E

Electric mobilities in liquid Bi alloys ... 866–876
Electrical conductivity
of Cu-Zr-As alloys ... 531–541
of tungsten-rhenium lamp wire ... 451–461
Electrical resistivity
of low-carbon steel ... 624–639
of K state ... 737–743
Equilibrium diagram
iron-nickel ... 136
Ni-Ti ... 271
Etching
by monoenergetic ion bombardment ... 474–482
Extrusion
analysis of ... 697–718

F

Fatigue damage ... 362
Flow properties
of low-carbon, low-manganese steel ... 101–118
Formability
nickel-tungsten-chromium alloys ... 728–736
Fracture
appearance as affected by ausforming treatment ... 661
surfaces, in heat treated 4340 steel ... 599–612
Fracture behavior of low-carbon, low-manganese steel ... 144
Fracture mechanism
influence of temperature on, in Duranickel ... 580–598
Fracture surface
in brass ... 25
of ausformed 3% Ni-3% Mo steel ... 664
Friction, internal
vs temper brittleness in an alloy steel ... 439–450

G

Gadolinium-Y alloys ... 483–491
Gas-solid reactions
hydrogen in beryllium ... 744–748
Grain boundary damping in 3130 steel ... 439–450
Grain size
effect on strength of mild steel ... 101–118

H

Heat capacity
of liquid In-Sn alloy ... 853–857
Helium
effect on 1¼ Cr-½ Mo steel ... 45–50
effect on 316 stainless steel ... 45–50
High-strength steels
4340
fracture toughness ... 216

High-strength steels (cont.)
fracture strength ... 214–229
effect of shallow crack length ... 217, 218, 219
effect of size and type of cracks ... 215
fracture toughness
effect of shallow crack ... 220
effect of stress ... 217
of H-11 ... 216
Hydrogen
absorption by Zircaloy-2 and Zircaloy-4 ... 77–99
in beryllium ... 744–748

I

Impact properties
3130 ... 439–450
Impact strength of ausformed alloy steels ... 654–666
Indium-Sn alloy
liquid, heat capacity of ... 853–857
Iron, ingot
lattice strains under elastic loading ... 51–57
Iron-nickel alloys
30% Ni, strength after ausforming ... 640–653
Isothermal transformation diagram for 3% Ni-3% Mo. steel ... 656

K

Kirkendall interface ... 3
Kirkendall shift
diffusion couples ... 6

L

Lanthanum-Gd alloys ... 438–491
Lanthanum-Y alloys ... 483–491
Lead-Zn alloys
self-diffusion of zinc in liquid alloys ... 858–865
Liquid metals
density of Pu and Pu-Ce-Co alloy ... 819–825
density of Sb ... 849–852
density of Sn ... 844–848
electric mobilities in liquid Bi ... 866–876
heat capacity of liquid In-Sn alloy ... 853–857
measurement of surface tension ... 757–777
measurement of viscosity ... 790–818
self-diffusion of Zn in liquid Pb-Zn alloys ... 858–868
sludge formation in Pb-Hg ... 254–259
surface tension in liquid Zr-rare earth alloys 786–789
surface tensions and surface adsorptions in Fe-C-Cr alloys ... 778–785
vapor pressure of Cs, Rb and NaK alloy ... 877–890
viscosity of Pu and Pu-Ce-Co alloy ... 819–825
viscosity vs atomic mobility ... 826–843
Lodex ... 930
Low-temperature properties
austenitic stainless steels ... 399–419
Luder's bands
activation energies for propagation of ... 505–517

M

Magnet, permanent
materials ... 923
Magnetic crystals ... 927
Manganese
effect on strength of mild steel ... 101–118
Magnesium
critical resolved shear-stress ... 368
Maraging steel ... 58–76
heat treatment of ... 518–530
Martensite
effect of carbon on strength of ... 355
effect of nickel on strength of ... 355
lattice ... 349
strength of ... 347–361
strength of, in ausformed alloy steels ... 640–653
tetragonality ... 350
Matensite reaction
in austenitic stainless steels ... 399–419
measurement ... 351
Martensitic transformation, effect on mechanical test properties ... 399–419
Mercury
embrittlement by, of aluminum alloys ... 429–438
Mercury-In alloys
constitution of ... 891–897
Mercury stress-crack propagation
in 70/30 brass and 2024-ST4 aluminum ... 22–44
Metallography
anodic oxidation for inhomogeneity ... 363
etching by monoenergetic ion bombardment ... 474–482
of precipitation of phosphorus from alpha iron ... 719–727
polishing technique for flat edges ... 369
Th-V alloys ... 303
Microstructures
unconventionally produced ... 917–932

N

Neutron irradiation
effect on stress-rupture strength of A-286 and Inconel X ... 565–579
Nickel-aluminum alloys
structural changes during formation of K state ... 737–743
Nickel-chromium alloys
effect of neutron radiation on
A-286 ... 565–579
Inconel X ... 565–579
Nickel-molybdenum-chromium alloy
thermal conductivity ... 749–751
Nickel-tungsten-chromium alloys
fabricability ... 728–736
Notch toughness
effect of low-temperature finishing on ... 396
of ausformed alloy steels ... 654–666

Notched slow-bend test 393
Notched-tensile strength of austenitic stainless steels 405
Notched-unnotched strength ratios of austenitic stainless steels 415

O

Ordering kinetics in Fe_3Al 335–346
Oxidation
of columbium 119–134
of Cu-Ni alloys 158–168
of tungsten-base alloys 193–201
temperature dependence in copper-nickel alloys 159
Oxidation kinetics for Cu-Ni alloys
relationship to oxide microstructure 161
Oxidation resistance
of Ni-W-Cr alloys 728–736

P

Phase diagram
see *Constitution diagram*
Phase relationships
in Ni-W-Cr system 731
Phase study
effect of mean free path on ductility . 236, 237
effect of mean particle spacing on ductility .. 236, 237
effect of second phase 230–250
effect of volume fraction of second phase on ductility 236, 237, 243
effect of volume fraction of voids on mechanical properties 233
strain hardening exponent 239
Phase transformation in austenitic stainless steels 405
Phosphides
precipitation from iron-phosphorous alloys .. 719–727
Plastic deformation
activation energy in columbium 186
Plutonium
physical properties 261–264
viscosity and density 819–825
Plutonium alloy
viscosity and density 819–825
Polishing, of metallographic specimens . 369–372
Powder metallurgy of tungsten-rhenium ... 451–461
Precipitation
of phosphorous from alpha iron 719–727
Precipitation hardening by aging
of 18% Ni maraging steels 518–530

R

Refractory alloys
inhomogeneity 363
Resistivity, electrical
in internally oxidized Ag-Mg alloy .. 259–261
of Fe_3Al 335–346
Rhenium alloys
tungsten-rhenium 451–461
Rolling
of beryllium sheet 685–696
Rubidium
liquid, vapor pressure of 877–890
Rupture behavior
of $1\frac{1}{4}$ Cr-$\frac{1}{2}$ Mo in helium 45–50
of 316 stainless steel in helium 45–50

S

Self-diffusion
of Zn in Pb-Zn alloys 858–865
Shear-stress
for basal slip in Mg-Li crystals 151
Shear test
critical resolved shear-stress law 366
Shrinkage
effect on mechanical properties of castings .. 320
Silicon
effect on epsilon carbide in 43xx steels ... 297
effect on low-carbon martensite in 43xx steels 297
effect on mechanical properties of
4315 287–300
4325 287–300
4337 287–300
effect on retained austenite in 43xx steels .. 298
Silver-Mg alloy
electrical resistivity 259–261
Single-domain particles 928
Sodium-potassium alloy
liquid, vapor pressure of 877–890
Stacking faults
in martensite 350, 352
Stainless steel
effect of cold rolling on mechanical properties 462–473
effect of composition in mechanical properties 462–473
effect of heat treatment on mechanical properties 462–473
low-temperature mechanical properties 399–419
work hardening characteristics 412
Stainless steel, specific types
AM 350
mechanical properties 404
16 Cr-2 Ni
constitution diagram 279, 285
dilatometry analysis 278
equilibrium conditions 277
hardness 283–284
microstructures 280–283, 285
phases 279, 280, 284
17 Cr-14 Mn-0.43 N
mechanical properties 404
18 Cr-2 Ni
retained austenite 282
18% Ni maraging type 518–530

Stainless steel (cont.)
202
mechanical properties 404
304
impact properties 410
mechanical properties 403
phase transformation vs yield strength . 405
notched tensile strength 406, 407
304-L
mechanical properties 403
310
impact properties 410
mechanical properties 404
notched tensile strength 407
316
rupture behavior in helium 45–50
410
tensile properties after ausforming .. 648
Steel, brittleness in hot rolled plate 389–398
Steel, low carbon
effect of carbon in solution on properties .. 624–639
Steel, AISI-SAE types
1050
effect of straining and aging on compressive yield strength 20
3130
impact properties 439–450
internal friction 439–450
4140
cold drawing in martensitic condition 667–684
43xx
austenite, retained 287–300
4340
cold drawing in martensitic condition 667–684
effect of temperature on fracture surfaces .. 599–612
86B30
cold drawing in martensitic condition 667–684
Steel, alloy
3 Cr
strength after ausforming 640–653
5 Cr
strengthening of 612–623
12 Cr
strength after ausforming 640–653
9 Ni
impact toughness 138
transformation characteristics 136
TTT diagram 137
Steel, strengthening by cold drawing in martensitic condition 667–684
Stress concentration
titanuim alloy 373–389
Stress-crack propagation
dislocations 39
effect of inhomogeneities 39
mechanism 35
mechanism of open crack formation 40
Stress-crack propagation (cont.)
time delay of initiation 41
Stress-rupture properties
of A-286 565–579
of Inconel X 565–579
Stress-rupture strength
hot work die steels 613–623
Surface
damage of, in Be 492–504
Surface adsorption
in liquid Fe-C-Cr alloys 778–785
Surface condition
effect on transition temperature 307
Surface tension
in liquid Fe-C-Cr alloys 778–785
in liquid Zr-rare earth alloys 786–789
measurement, in liquid metals 757–777
Superlattice formation 737–743

T

TD Nickel 920
Tear test for brittleness 10
Temper brittleness in 3130 steel 439–450
Temperature
effect on strength of 5% chromium tool steels 612–623
influence on fracture surfaces 599–612
Tensile properties
of Cu-Zr-As alloys 531–541
titanium-aluminum alloys 202–213
Tetragonal martensite
slip in 360
Thermal conductivity
of Ni-Mo-Cr alloy 749–751
Thorium
effect of V 304
Thorium oxide dispersions in Ni 920
Thorium-V system
eutectic composition 306
liquidus data 304
liquidus temperatures 302
melting point determination 302
solid-state transformation determinations ... 302
solidus data 304
Tin
liquid, density of 844–848
Titanium-Ni intermetallic compound
applications 276
decomposition 270
properties 269–276
Titanium alloys
Ti-Al
properties 202–213
Ti-Al-Hf
properties 202–213
Ti-Al-Zr
properties 202–213
Ti-13 V-11 Cr-3 Al
properties 373–389
Tool steels
5% Cr, ausformed by torsion 420–428

Tool steels (cont.)
5% Cr, strengthening by prestraining.... 612–623
H11, fracture strength.....214–229
hot work die steel, notch-impact strength after ausforming..... 654–666
Transition temperature
in high-strength strip..... 10–21
vs ASTM grain size..... 394
Transport number
of solutes in liquid Bi alloys..... 866–876
Tungsten
brittle-to ductile transition..... 307–318
Tungsten alloys
tungsten-rhenium..... 451–461
Twinning
in beryllium..... 492–504

V

Vacancies..... 341, 344
Vacancy decay..... 341, 345
van der Veen test (*see notched slow-bend test*)
Vapor pressure
of liquid Cs, Rb and NaK alloy..... 877–890
Vanadium
brittle-ductile transition..... 176
effect of oxygen on hardness, ductility and lattice constant..... 169–177
low-temperature embrittlement..... 176
Viscosity
measurement, in liquid metals..... 790–818
of liquid metals related to atomic mobility.. 826–843
of liquid Pu and Pu-Ce-Co alloy.... 819–825

X

X-ray diffraction of Th-V solubilities.. 302, 304
X-ray studies of lattice strains under elastic loading..... 51–57

Y

Yield, dynamic
of low-carbon, low-manganese steel. 101–118
Yield point phenomena in magnesium-lithium single crystals..... 149–157

Z

Zinc
critical resolved shear-stress..... 368
self-diffusion of, in liquid Pb-Zn alloys 858–865
Zirconium hydride
thermal conductivity..... 559
thermophysical properties..... 556–564
Zirconium-hydrogen system..... 542–555
